

YOUCEF RAHIM

ELECTRICAL, ELECTRONICS & AUTOMATION ENGINEERING STUDENT

Staoueli, Algiers | 0561 18 30 86 | youcefrahim63@gmail.com | linkedin.com/in/youcef-rahim-1bb19a358

PROFESSIONAL SUMMARY

Analytical and driven 2nd-year Engineering student at IGEE (ex-INELEC) with a strong foundation in electrical systems, automation, and renewable energy. Winner of the Arduino School 5.0 competition with hands-on experience in IoT development and data center infrastructure. Proficient in AutoCAD Electrical, KiCad 9.0, and hardware prototyping. Passionate about solving complex problems at the intersection of hardware and software, from optimizing high-performance PV systems to automating industrial and administrative processes.

PROFESSIONAL EXPERIENCE

IoT & Automation Engineering Intern

[Insert Month, Year – Month, Year]

CNEP Data Centre – Algiers, Algeria

- Developed and deployed an automated IoT environmental monitoring and protection system for data center servers, ensuring optimal operational conditions and hardware safety.
- Engineered solutions to automate repetitive administrative operations to increase facility efficiency.
- Designed and implemented a computer vision system for automated presence detection and attendance tracking.

EDUCATION

Licence in Electrical and Electronic Engineering (Year 2)

Expected 2027

Institute of Electrical and Electronic Engineering (IGEE / ex-INELEC) – Boumerdes, Algeria

- Key Modules:** AC/DC Circuit Analysis, Active Devices (Semiconductors/Solar Cells), Digital Systems, Signal Processing.
- Academic Excellence:** 100% English-language curriculum with a strong focus on mathematical modeling and international engineering standards.

PROJECTS & AWARDS

Winner – Arduino School 5.0

2024

- Designed an Arduino-based multiplexing system improving signal efficiency and reducing hardware complexity.
- Recognized for clean architecture, reliability, and optimized C++ performance.

Energy & Circuit Laboratories

IGEE

- Analyzed transformers and generators (efficiency, voltage regulation) relevant to PV grid systems.
- Tested diodes and MOSFETs for understanding inverter switching and power flow.
- Applied safety protocols and basic site assessment practices.

TECHNICAL SKILLS

Engineering Design: AutoCAD Electrical, KiCad 9.0, Multisim 14.3

Hardware & IoT: Arduino, Sensor Integration, Soldering, Prototyping, Embedded Systems
Software & Automation: Computer Vision, Automation Scripts, MATLAB, PSpice, Excel
Solar Fundamentals: PV sizing basics, inverter/module selection, energy conversion
Instrumentation: Oscilloscope, Digital Multimeter

CORE COMPETENCIES
System Optimization, IoT Integration, Analytical Problem-Solving, Sustainability Focus, Rapid Prototyping

LANGUAGES
English: Professional | French: Fluent | Arabic: Native
